

Attitude Adjustment Sailing, LLC Captaining, Maritime Training, and Consulting Services

Captaining

Regardless of the reason, Attitude Adjustment Sailing, LLC can provide a seasoned USCG licensed Captain for any vessel up to 500 gross tons. So if for example your insurer requires a licensed master at the helm, we can help by providing the appropriate Captain for your vessel. We will not send a 500 ton Captain for your 20 gross ton boat. This allows us to keep the cost down to you the client.

Some Examples of when a Captain may be needed:

- ***Large Vessel Operations***
- ***Insurance Requirement***
- ***Personal Preference***
- ***Formal Event***
- ***Relocate Vessel***
- ***Expedition Cruise***

Maritime Training

Experience Counts! Let our highly skilled Captains provide you with the Training you want and need.

We have years of experience on a variety of different Motor and Sailing vessels running an array of different electronics and all with different handling characteristics. This experience has served us well in so much as we now know the major systems onboard most yachts and have a good feel for the differences of various boats in terms of operations and handling.

With over 350,000nm and decades of experience on a wide range of boats, there is little that takes us by surprise. However, these are boats we are talking about, so you're always going to get pitched a curve ball from time-to-time. This is where experience counts.

Maritime Training

We practice the learn by doing approach.

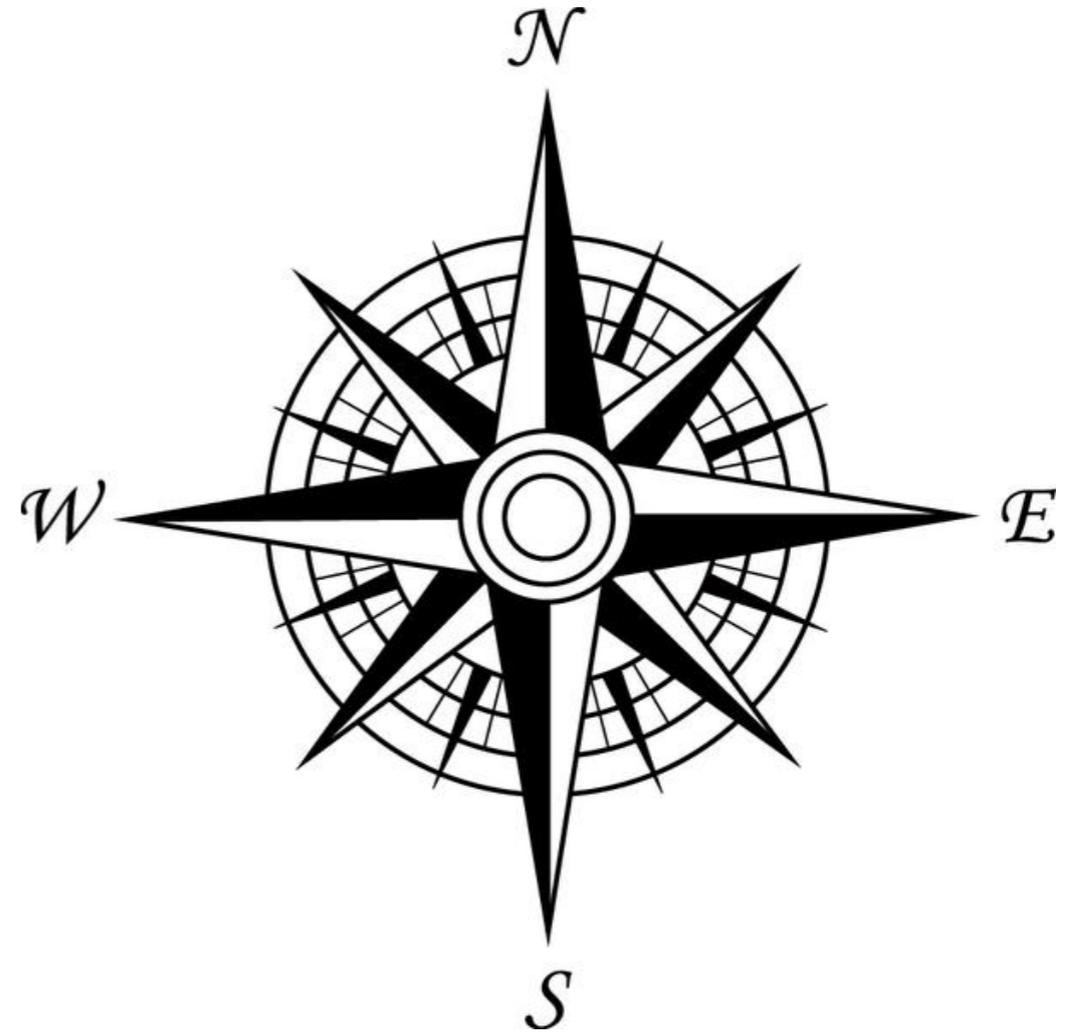

Topics that can be integrated into a comprehensive course of maritime training include; preliminary planning, use of pilot charts and other sources of meteorological data, navigation, charting, outfitting, preparations, provisioning, storage, watch schedules, station bills, radar, chart plotter, autopilot, gauges, engine operations and maintenance, route planning, crew requirements, equipment requirements, sailing, heavy weather boat handling, close quarters boat handling and docking procedures.

Project Management Consulting Services

Experience Counts! We can offer guidance on vessel acquisitions, USCG compliance issues, new builds, re-fits, charter operations, rigging choices, electronics, and ships systems. We can also provide route planning and all necessary logistical support for your next adventure.

We can take charge of any project and manage it to its completion. Please contact us today
